## 출판사 소개

- ✓ 1478년부터 출판을 시작한 오랜 역사를 가진 세계에서 가장 큰 대학 출판부
- ✓ 아시아-태평양 지역 상위 100개 대학 중 80%, 상위 20개 대학 중 90%가 OUP의 Journals Collection을 구독
- ✓ 원문 제공 년도 : 1996년 ~ 현재 (저널별로 다름)
- ✓ 주제 분야 : 생명과학, 의학, 인문사회과학, 법학, 등 전 주제 포괄
- ✓ 저널 종수 : 359종 (2020 Full 컬렉션 기준)
- ✓ 저널 이용 홈페이지 : <https://academic.oup.com/journals>

# Main Page (1)

The screenshot shows the Oxford Journals website. At the top right, there are links for 'Sign In' and 'Register' (labeled D). The main navigation bar includes 'Journals A to Z' (labeled A), 'Journals by Subject' (labeled B), 'Customer Services', and 'Resources' (labeled E). A search bar with a dropdown menu (labeled C) is also present. Below the navigation bar, there are several featured sections: 'Part of the academic community' with a background image of a building, 'A trusted society partner' with a background image of people, 'Content with impact' with a background image of a network diagram, and 'Open access' with a background image of a padlock. A yellow callout box with the text 'Open Access 저널로 이동' points to the 'Open access' section.

# Browsing by Title

The screenshot shows the 'Journals A to Z' page on the Oxford University Press website. The page has a dark blue header with navigation links: 'Journals A to Z', 'Journals by Subject', 'Customer Services', and 'Resources'. A red box highlights the search bar with 'All Journals' selected and an 'Advanced Search' link. On the left, a yellow arrow labeled 'A' points to the 'Journals A to Z' link. In the center, a yellow arrow labeled 'B' points to the alphabetical list 'ABCDEFGHIJKLMNOPQRSTUVWXYZ', and another yellow arrow labeled 'C' points to the letter 'A'. Below 'A', a list of journal titles is shown, including 'Acta Biochimica et Biophysica Sinica', 'Adaptation', 'Advances in Nutrition', 'Aesthetic Surgery Journal', 'African Affairs', 'Age and Ageing', 'AIBS Bulletin (now BioScience)', 'Alcohol and Alcoholism', 'American Entomologist', and 'The American Historical Review'. On the right, a 'Connect' section lists social media links for Facebook, Twitter, YouTube, and a mailing list. Below that, a 'Useful links' section has arrows 'D' and 'E' pointing to 'Changes to our list' and 'Frequently asked questions' respectively. At the bottom right, a 'Frequently asked questions' box contains links for 'Apps', 'Authors', 'Librarians', and 'Oxford Open', with a URL 'bit.ly/2FPvgYA' below it.

**Bayesian Models, Delusional Beliefs, and Epistemic Possibilities**  
Matthew Parrott  
Abstract ▲

The Capgras delusion is a condition in which a person believes that an imposter has replaced some close friend or relative. Recent theorists have appealed to Bayesianism to help explain both why a subject with the Capgras delusion adopts this delusional belief and why it persists despite counter-evidence. The Bayesian approach is useful for addressing these questions; however, the main proposal of this essay is that Capgras subjects also have a delusional conception of epistemic possibility, more specifically, they think more things are possible, given what is known, than non-delusional subjects do. I argue that this is a central way in which their thinking departs from ordinary cognition and that it cannot be characterized in Bayesian terms. Thus, in order to fully understand the cognitive processing involved in the Capgras delusion, we must move beyond Bayesianism.

**Abstract**  
I defend a radical interpretation of biological populations—what I call population pluralism—which holds that there are many ways that a particular grouping of individuals can be related such that the grouping satisfies the conditions necessary for those individuals to evolve together. More constraining accounts of biological populations face empirical counter-examples and conceptual difficulties. One of the most intuitive and frequently employed conditions, causal connectivity—itself beset with numerous difficulties—is best construed by considering the relevant causal relations as ‘thick’ causal concepts. I argue that the fine-grained causal relations that could constitute membership in a biological population are manifested by different kinds of membership as being related in different ways. If these different kinds of membership are to be related in different ways, the different kinds of membership must be related in different ways. Showing that position depends on a view of what counts as a biological population is defended here.

...and frequently employed conditions, causal connectivity itself beset with numerous difficulties—is best construed by considering the relevant causal relations as ‘thick’ causal concepts. I argue that the fine-grained causal relations that could constitute membership in a biological population are huge in number and many are manifested by degree, and thus we can construe population membership as being defined by massively multidimensional constructs, the differences between which are largely arbitrary. I end by showing that positions in two recent debates in theoretical biology depend on a view of biological populations at odds with the pluralism defended here.
