Chemical Communications

About our publications

The Royal Society of Chemistry publishes 56 peer-reviewed journals, around 2,000 book titles and a collection of online databases and literature updating services.

Our international publishing portfolio covers the core chemical sciences including related fields such as biology, biophysics, energy and environment, engineering, materials, medicine and physics. As a not-for-profit publisher, we reinvest surplus funds back into the global scientific community, supporting our mission to advance excellence in the chemical sciences.

Open access

All of our journals offer authors the option to choose an open access licence. In addition to our subscription journals, where authors can also publish through the traditional route, we have a growing number of fully open access journals.

키워드 검색

The screenshot shows the search results page for 'Biomaterials Science' on the Royal Society of Chemistry website. The search bar at the top contains the keyword 'Biomaterials Science'. The page displays search results for 16,006 items, sorted by relevance. The results are categorized into 'All' (16,006), 'Articles' (15,180), and 'Chapters' (826). A dropdown menu shows 'Sort by relevance'. The page also features a 'Best matches' section with collections like 'Biomaterials Science Lectureship Winners' and 'Biomaterials Science Emerging Investigators 2021'. A 'Search filters' section is visible on the right, showing filters applied for 'Content Type - all', 'ARTICLE ACCESS' (Open Access: 2603), and 'AUTHOR' (Wei Wang: 59). The main content area includes an editorial titled 'News from the Biomaterials Science editors' with three journal covers displayed below it.

Advanced Search Tips

Full Text / Keyword

Search phrase entered in this field will run a search across the full text of journals. The different search fields allow more complex searches to be run. Boolean Operators AND, OR and NOT (in capitals only) can be used while searching in the 'with all of the words' field. You can also use '+' (AND operator) and '-' (NOT operator).

Search within Reference Section

The default search does not search within the Reference Section of articles. To include reference sections in a search, select to 'Include Reference'.

Authors

Family Name = Surname. Given Name = First Name. You can include additional people using the "Add Author" link and the OR operator will be added between these names.

Article

Within a search of titles, Boolean Operators AND, OR and NOT (in capitals only) can be used. You can also use '+' (AND operator) and '-' (NOT operator).

Publication Date

The default is to search across all dates from 1841. To search for a date range choose the 'Select Date' option. There are two ways to specify a date range: within the last X months/weeks/years or by specifying start and end dates.

Topological effect of an intramolecular split G- quadruplex on thioflavin T binding and fluorescence light-up†

Check for updates

Mengmeng Lv,^{ab} Jiangtao Ren,^{ab} and Erkang Wang,^{ab}

Author affiliations 저자 정보

Abstract

In this work, the topological effect on binding interaction between a G-quadruplex and thioflavin T (ThT) ligand was systematically investigated on a platform of an intramolecular split G-quadruplex (Intra-SG). Distinct fluorescence changes from ThT were presented in the presence of distinct split modes of Intra-SG structures and an intriguing phenomenon of target-induced fluorescence light-up occurred for split modes 2 : 10, 5 : 7 and 8 : 4. It was validated that hybridization between the Intra-SG spacer and target did not unfold the G-quadruplex, but facilitated the ThT binding. Moreover, the 3' guanine-rich fragment of Intra-SG was very susceptible to topology variation produced by the bound target strand. Additionally, a bioanalytical method was developed for ultrasensitive gene detection, confirming the utility of the ThT/Intra-SG complex as a universal signal transducer. It is believed that the results and disclosed rules will inspire researchers to develop many new DNA-based signal transducers in the future.

BibTex, EndNote, RefWorks 등으로
인용정보 확인 가능

Introduction

A G-quadruplex (G4), as a secondary structure formed by guanine telomeres and plays an important biological role.² G4 is related to cell division, biological aging and tumor cell immortalization,^{3,4} and numerous organic ligands which are capable of recognizing and stabilizing G4 for the purpose of disease diagnosis and treatment^{5,6} have been reported, such as PcN4,⁷ BAMA,⁸ and TCPP.⁹ Many G4 ligands reveal a prominent feature of G4-induced luminescence enhancement, and intriguing G4-specific probes, e.g., N-methyl

About this book

There is growing concern about the state of the world's oceans. The rapid growth of human populations in coastal regions has led to increasing dependence on marine resources. Beneficial features related to food supply and life style need to be balanced against the hazards

RSC 모바일서비스 이용안내

1) 모바일 사이트 URL : <https://pubs.rsc.org/>

2017년 10월부터 어플리케이션이 아닌 사이트 접속을 통한 모바일 서비스 제공

2) 이용방법 :

- 관내 접속: 관내 IP 대역 내에서 이용할 경우, <https://pubs.rsc.org/> 페이지로 바로 접속하여 이용
- 관외 접속: 기관의 Shibboleth 또는 OpenAthens 인증, 프록시 서버로 접속

3) 모바일 서비스 특징

- 모바일 브라우저에 최적화된 디스플레이
- 구독 중인 출판물 및 최신발행 무료저널 이용 가능
- HTML 및 PDF 형태의 원문 저장 및 보기(오프라인 작업 가능)
- Email, Twitter, Facebook를 통한 아티클 전송 및 공유

EBSCO

감사합니다.
